

## How Advanced Technologies Power AP Automation

HAPPENING NOW

### Artificial Intelligence

A.I. technologies are already being leveraged in the Yooz solution. Rather than replace the AP clerk, it will simply force that position to evolve.

- ➔ As machines take over repetitive, time-consuming tasks, the AP clerk will find creative new ways to add value to their organization.
- ➔ AI-powered automation allows AP professionals to graduate from data entry to data analysis and collaboration.
- ➔ Add in machine intelligence and smart data extraction and the AP department becomes part of a broader sourcing strategy.

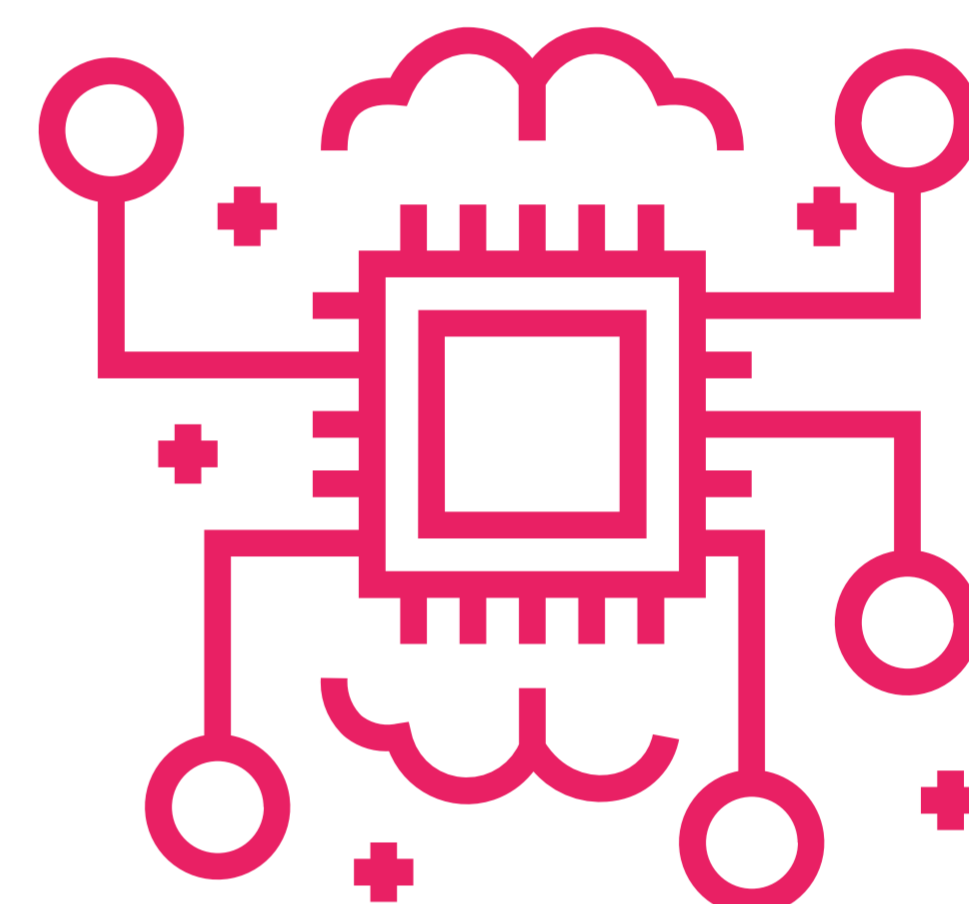

### Machine Learning

The science of getting computers to act without being explicitly programmed.

- ➔ With Yooz intelligent document capture, the system actually gets “smarter” the more you use it!
- ➔ With machine learning, powered by A.I., the AP Department becomes part of a broader sourcing strategy.

### Smart Data Extraction

Technology that transforms text converted via OCR (optical character recognition) into relevant data.

LOOKING AHEAD

### Blockchain

New forms of encryption keep transaction details private while allowing a network of users to verify them. And the provenance, authenticity, and accuracy of stored records are guaranteed.

We see it impacting the AP workflow in the near future:

- ➔ No need to check an invoice against a P.O., which eliminates errors. One day, it might even eliminate the need for an invoice.

**Blockchain** can one day be a smart contract between trading partners and also help the financial operations team become more strategic.

It can also connect vendors to buyers and customers to business.
